### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew O'Brien on 20 January 2010.

Claims 23, 32, and 35 are replaced as indicated:

Claim 23: --A computer storage medium having computer-executable instructions stored thereon that, when executed, cause a computing device to perform a method for processing data through a collection of one or more media objects, the method comprising:

receiving from a stream-source object a plurality of media data streams at once in different formats via a control layer, which provides a single interface between the stream-source object and a plurality of other objects;

transferring a media data stream of the plurality of media data streams to a transform object to be modified;

receiving at the control layer the media data stream that was modified; and

transferring the media data stream to a stream-sink object which is usable to transfer the media data stream to a data sink, wherein the stream-sink object operates subject to a media-sink object that implements a state machine to control a state of

transfer of the media data stream on a per stream basis, the state machine being implemented according to a control signal from the control layer.--

Claim 32: -- A computing system, which includes one or more computing devices having a processor, a server, and a computer storage medium, the computing system configured to provide a multimedia system, the multimedia system comprising:

a control layer maintained on one or more computing devices, the control layer configured to provide a single interface to a stream source, a transform, a media sink, and a stream sink; and

a core layer maintained on the one or more computing devices, the core layer coupled to the control layer, the core layer including:

- (1) the stream source, which transfers media data streams to the control layer;
- (2) the transform, which receives the media data streams from the control layer and converts a format of the media data streams;
- (3) the media sink configured to implement a state machine to control transfer of the media data streams on a per stream basis through the multimedia system, the state machine being implemented according to a control signal from the control layer; and
- (4) a stream sink configured to dynamically modify the media data streams via the control layer and an identified state of the media data streams determined in the media sink components.--

Claim 35: --The computing system of claim 32 wherein the core layer includes a media source.--

***Allowable Subject Matter***

**Claims 1-24 and 26-46 are allowed.** The following is an examiner's statement of reasons for allowance: The prior art, either in alone or in combination, fails to teach the claimed method, computer storage medium, and computing system. Specifically, the prior art fails to teach the claimed data transferring between the control layer and the various objects, including the media and stream source objects, transform objects, and media and stream sink objects.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
